f.albanese@orthoservice.com

Every day we begin
to be what we
want to become.

Mission

We design, manufacture and sell a comprehensive range of orthoses, insoles and medical compression products. Our ability to manufacture with great flexibility and offer excellent value for money has made us an industry leader, but we are still a family at heart and strive to ensure the success and development of the entire group.

Vision

We focus on organisation. With flexible product ranges and commitment to care, we want our products to be easily accessible to as many people as possible and represent the brand of choice for orthopaedic technicians, specialists and patients alike. When effective rehabilitation is offered in a non-invasive manner it becomes more than a concept: it means a better quality of life.

Take
care
feel
better

Italian Design

Designing a product implies getting involved, and everytime it's a new challenge that we accept enthusiastically. We work to make the brace functional as doctors recommend us, practical for technicians that will adapt it and effective in making the patient's life easier. Matching all requirements is not easy, but when we are able to generate design with an original solution which helps a person to live better, it makes it worthwhile for us.

*Francesco Turconi, engineer, R&D,
Swiss Headquarters*

European Manufacturing

Ortoveneta

Here in Italy we are in charge of products having both aluminum and plastic components. However, before applying the components to the products, we have to design machinery for their applications. We need to evoke our creativity by involving our skills such as inventiveness and strictness.

Michele Caporello, CEO, Ortoveneta, Italy

ICS Orthoservice

In the Moldovan craftsmanship we have found a great partner. In Moldavia we manufacture a lot of products that require the utmost accuracy and precision together with quality. Each project is a real chisel work, like true perfectionists.

Maurizio Pilastro, Head of ICS Production, Moldova

Swiss Precision Planning

Putting theory into practice requires intuition and patience.

After checking the project's feasibility, we select raw materials matching our quality standards through preferred European suppliers. We choose the manufacturing site according to the product. Afterwards, we plan terms and timing according to the range of products in our catalogue. Our goal is to define who does what.

*Mauro Ravese, production planning,
Swiss Headquarters*

Worldwide Exports

Orthoservice is operating in 30 countries Worldwide; our partners are all leading Distributors in their countries.

The company exports the Made in Italy and the Italian-Swiss research, development and experiences; We guarantee the high-quality standard and the recognizable of the products. I'm honestly proud to be part of the Orthoservice team and I value our partners daily involved in Orthoservice family to share the common vision of the future. My personal "GRAZIE" to all of you

*Fabio Albanese, Export and Domestic
Sales Manager*

cervistrong

ITEM M20304

Reinforced neck brace

INDICATIONS

- Mild or moderate distortions of the cervical spine (whiplash).
- Neck-induced vertigo
- Cervical osteoarthritis
- Moderate discopathies with associated cervicobrachial pain syndrome

FEATURES

- Core made of semi-rigid foam ((with rounded edges) reinforced with polyethylene inside the brace
- Tubular jersey cover
- Velcro® fastening at back of neck
- Fully washable
- X-ray transparent
- Anatomically shaped design.

SPEEDS UP HEALING
AND RELIEVES PAIN

THE SUPPORT OF A SEMIRIGID NECK BRACE

A special **stiff polyethylene core** with polymer reinforced edges immobilises the cervical spine helping it to support the neck as it normally would. It feels imperceptible against the skin.

THE COMFORT OF A FOAM NECK BRACE

The soft foam rubber design is already shaped and **adapts to fit the wearer's neck** by following the curves of the jaw and the nape of the neck.

RELIABLE, COMFORTABLE AND PRACTICAL

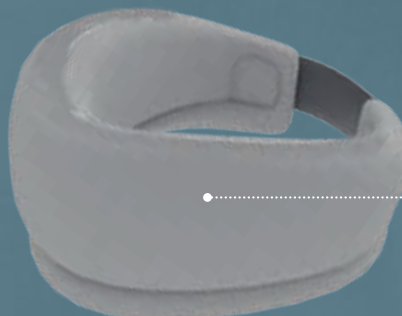

The brace is covered with a **soft jersey fabric** that feels soft and comfortable against the skin. It fastens at the back with **Velcro®**, making the brace quick and easy to put on.

Sturdy polyethylene core with polymer edges

The soft foam rubber design is anatomically shaped

Jersey covering and rear Velcro® fastening

cervilight schanz

ITEM M1505

Cervical collar, schanz type with adjustable Velcro® straps

INDICATIONS

- Moderate to severe distortions of cervical spine (whiplash)
- Cervical vertigo
- Arthritis of cervical spine
- Serious disc disease or slipped discs associated with cervicobrachial symptoms
- Use after cervical spine surgery

FEATURES

- Rigid plastic structure perforated for ventilation
- Foam edges covered with non-toxic leather-like

ITEM M1530/T

Bivalve cervical collar with open trachea

INDICATIONS

- Severe to serious distortions of cervical spine (whiplash)
- Multiple disc diseases of cervical spine
- Cervical trauma
- Arthritis of cervical spine
- Pathological failure due to cervical metastasis
- Use after cervical spine surgery

FEATURES

- Structure made of wrapping bivalve with Back Velcro® fastening system
- Structure made of non-citotoxic polymeric foam in compliance with UNI EN ISO 10993-5
- Rigid plates for back, front and central support
- Radiolucent and waterproof
- Shaped for a perfect adhesion to chin, neck and shoulders
- Open trachea and holes for ventilation

dorsolite

Back orthopedic brace

ITEM M91111

INDICATIONS

- Useful for the correction of a curved back, kyphosis and scapular winging
- A useful aid for back pain caused by poor posture

FEATURES

- The support and straps are made of PE foam in a bi-layer of velveteen and technical material a back pulley system provides better traction when fastening
- The straps can be adjusted and shortened using the Y- Velcro® straps to adjust overall length and shoulder straps position
- Fastens with a snap-fit buckle
- Easy to put on, just like a backpack

lumboSKILL70

ITEM M33170

Low elastic orthosis with rigid and thermoformable pads to stabilize the lumbar rachis and relieve pressure

INDICATIONS

- Lumbalgia
- Sciatic lumbalgia and cruralgia
- Spondylarthrosis and lumbar discopathies
- Slight traumas to the lumbosacral column and paravertebral lumbar contractures Postoperative recovery

FEATURES

- The graduated design of the elastic compression fabric on the front and on the sides provides more compression in the middle and a looser fit around the edges; made of polyester and elastomer
- The back is made of BreathSkill fabric:
 - soft and breathable
 - 3D weaving
 - special laminated covering for extra resistance crossed strengthening straps provide variable and customisable compression
- The abdominal section is reinforced with oblique spiral stays
- Front Velcro® fastening system
- Adapts to the pathology of the patient
- 2 front and back thermoformable pads, on medical prescription
- Optional rigid stays, mouldable on medical prescription; to insert in the 4 linear back pocket

M90074 back splint

lumbopull70

ITEM M90070
PATENT: EP2965726

Low orthosis with easy-pull tensioning straps for stabilising and supporting the lumbar spine

INDICATIONS

- Lumbago
- Sciatic lumbalgia and lumbar cruralgia
- Spondylarthrosis and lumbar discopathies
- Slight traumas to the lumbosacral column and paravertebral lumbar contractures
- Post-operative recovery
- After-effects of stable compression fractures of lumbar vertebrae
- Treatment of fractures to transverse processes

FEATURES

- Compound fabric (3D fabric on the inside, special fabric on the outside): high rigidity to ensure the greatest possible stabilisation; breathable for the greatest possible comfort when wearing
- System of serially arranged pulleys and tensioning straps (exclusive) in order to achieve optimum stabilisation and tensioning with minimum application of strength. The closure multiplies the force exerted by the patient and ensures the even distribution of force along with optimum adaptability to the individual anatomy
- Slim strap on the rear (h=25 mm)
- Automatic blocking system to prevent the straps being unthreaded when opened
- Elastic rear insert (not structural) in order to prevent the back coming into contact with the straps and to apply various optional items using Velcro® fastener
- Anatomically shaped and easy to put on
- Large adhesive surface for maximum setting optional
- Paravertebral brace reinforcements
- Light
- Front pad with reinforcement welded inside. With insert for the hand to make putting on easier
- Optional: rigid lumbar pad, high or low, for improved support or back brace

OPTION: M70010/20

Item	M90072			
Size	S	M	L	XL
Pelvic circ. cm	70/85	85/100	100/115	115/130
Front height cm	20	20	20	20
Back height cm	31	31	31	31
Colour	chalk white			

OPTION: M70010 small lumbar pad, Size 24x23 cm
M70020 large lumbar pad, Size 24x31 cm
M90074 back splint

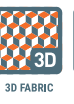

lumbopull72

ITEM M90072
PATENT: EP2965726

High orthosis with easy-pull tensioning straps for stabilising and supporting the lumbar spine

INDICATIONS

- Lumbago
- Sciatic lumbalgia and lumbar cruralgia
- Spondylarthrosis and lumbar discopathies
- Slight traumas to the lumbosacral column and paravertebral lumbar contractures
- Post-operative recovery
- After-effects of stable compression fractures of lumbar vertebrae
- Treatment of fractures to transverse processes
- Degenerative lumbar scoliosis
- Spondylosis with or without vertebral listhesis

FEATURES

- Compound fabric (3D fabric on the inside, special fabric on the outside): high rigidity to ensure the greatest possible stabilisation; breathable for the greatest possible comfort when wearing
- System of serially arranged pulleys and tensioning straps (exclusive) in order to achieve optimum stabilisation and tensioning with minimum application of strength. The closure multiplies the force exerted by the patient and ensures the even distribution of force along with optimum adaptability to the individual anatomy
- Wide strap on the rear (h=38 mm)
- Automatic blocking system to prevent the straps being unthreaded when opened
- Elastic rear insert (not structural) in order to prevent the back coming into contact with the straps and to apply various optional items using Velcro® fastener
- Anatomically shaped and easy to put on
- Large adhesive surface for maximum setting optional
- Paravertebral brace reinforcements
- Light
- Front pad with reinforcement welded inside. With insert for the hand to make putting on easier
- Optional: rigid lumbar pad, high or low, for improved support or back brace

dorsopull74

ITEM M90074

Padded dorso-lumbar back splint for the orthopedic Lumbopull orthosis

INDICATIONS

- Back pain due to arthrosis or kyphosis
- After-effects of fractures of dorsal vertebrae and/ or upper lumbar vertebrae
- After-Effects of stable compression fractures of the dorsal spine due to osteoporosis or metastasis

FEATURES

- When combined to Lumbopull 70 or 72, it becomes a padded shoulder orthopedic orthosis corset with shoulder straps
- Self-shaping dorsal stays included
- There is also the option of inserting a formable, stable internal frame which is made of aluminium alloy and radiolucent
- New length adjusting shoulder straps with an elastic panel at the back enable a secure fit and the brace to be worn like a backpack
- Two-fold compound padding made of PE foam

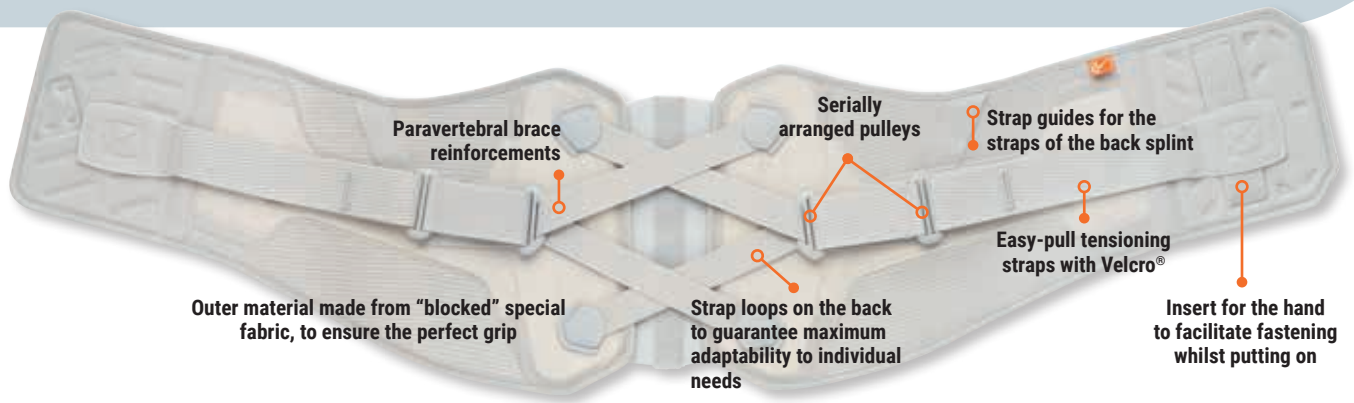

Item	M90074			
Size	XS	S	M	L
Distance T1-L5	35/41	41/47	47/54	54/61
Colour	chalk white			

lumbopull 70/72 - dorsopull74

MODULAR SYSTEM FOR LUMBOPULL AND DORSOPULL

	 M90072	 M90072 + 90074	

EFFICIENCY AND PARTICULARLY SLIM PROFILE

EXCLUSIVE PULLEY SYSTEM

Even for debilitated or older patients, **closing the orthosis is easy and comfortable**. Due to its exclusive pulley system and the special fabric the orthosis has an optimum supporting function. **Applying low force produces tensioning forces equaling a tension force four times of the force invested**. The tensioning forces are distributed homogeneously along the orthosis, in this way guaranteeing an optimum stabilising effect. The straps, made from special materials similar to the ones used for safety belts, are flexible and slide through the strap guides smoothly and without friction. They are crossed at the back to increase the supporting capabilities.

ANATOMICAL DESIGN

The orthosis is **designed to perfectly adapt to the body line which, especially in the lumbar region, differs from individual to individual**.

Thanks to its particular combination of design and material it has a **very slim profile, easily adapting itself** to the individual anatomy, while guaranteeing efficiency and supporting capabilities.

REINFORCEMENTS IN 2 ESSENTIAL POSITIONS

The orthosis comes with two new reinforcements: in order to **increase the rigidity** and the **supporting capabilities of the belt** a slim polymer reinforcement is integrated into the belt, optimum wearing comfort is guaranteed by cut-outs at the upper and lower end of the belt and the soft velour in these areas. At the back, a stronger reinforcement ensures greater stability and better supporting capabilities

SMALL AND LARGE LUMBAR PAD (OPTIONAL)

In case it is necessary **to increase the rigidity in the back region, it suffices to attach the 2 optional lumbar pads** to the orthosis using the corresponding Velcro® fastenings. Thermoformed and covered with the same soft fabric which is used for the soft insert, the pads can be modelled when warm. In this way they can be adapted perfectly to the lumbar area

ELASTIC INSERT AT THE BACK

The soft fabric of the insert **protects the skin from contact with the tensioning straps**. Diverse, optionally available accessories can be attached via Velcro®.

DORSOPULL

In case of pathologies which also affect the thoracic spine **the orthosis can be easily reconfigured to obtain a dorso-lumbar brace** by mounting the optionally available back splint Dorsopull on the orthosis. Dorsopull is made of **padded fabric and reinforced internally with self-modelling aluminium struts and a rigid frame**.

Using Dorsopull, the resulting triangle of pressure on the thoracic spine and counter pressure on the shoulders and the hip not only supports the vertebral column, but also favours the return to a physiological posture.

If necessary the rigid inner frame can be removed so that the column is only supported by the self modelling struts. The shoulder straps are crossed on the back, padded and can be adjusted as well.

spinalplus

ITEM **MT1049**
PATENT **EP2502608**

Spinal brace for osteoporosis

INDICATIONS

- Dorsolumbalgia after healing of stable compression fractures of dorsolumbar vertebrae
- Stable compression fractures of dorsolumbar vertebrae caused by osteoporosis or metastatic tumors
- Hyperkyphosis of the thoracic spine, posttraumatic or caused by arthrosis
- Juvenile osteochondrosis

FEATURES

- Padded shoulder straps with position settings which can be set prior to use
- Velcro® closure
- Elastic insert with biodynamic effect
- Mouldable inner frame in aluminium alloy, X-ray permeable (except for the snap fasteners)
- Abdominal and dorsal tensioning straps, made of comfortable belt material
- Buckles with self-aligning mounting points
- State-of-the-art system of tensioning straps, protected by patent EP2502608
- Two-layer PE padding with suede and mesh fabric cover

Item	MT1049			
Size	XS	S	M	L
Distance T1-L5 cm	35/41	41/47	47/54	54/61

spinalplus 2.0

ITEM **M33049**
PATENT **EP2502608**

Spinal brace for osteoporosis

INDICATIONS

- Dorsolumbalgia after healing of stable compression fractures of dorsolumbar vertebrae
- Stable compression fractures of dorsolumbar vertebrae caused by osteoporosis or metastatic tumors
- Hyperkyphosis of the thoracic spine, posttraumatic or caused by arthrosis
- Juvenile osteochondrosis

FEATURES

- Malleable radiotranslucent aluminium alloy inner frame
- Patented strap system (Patent EP2502608):
 - fastens around the abdomen with a corset
 - a unique tensioning system – all the rear straps and the shoulder straps can be

- tightened by pulling the pads
- a special system magnifies the force exerted to double the tension of the shoulder straps – maximum effectiveness with minimum effort
- Dorsal-abdominal straps with a lowfriction strap
- Dorsal-abdominal straps attached directly to the metal frame with self aligning buckles and press studs
- The abdominal corset ensures greater comfort and stability:
 - Velcro® fastening
 - adjustable length
 - bonded stretchy MTP section and technical stretch fabric
- Biodynamic, stretchy dorsal insert
- Padded shoulder straps with the option of pre-setting their positions
- PE padding bonded with velour and technical fabric with bonded edges

OPTION: M33049/P inflatable pad

spinalplus 2.0

THE SPECIAL DETAILS THAT MAKE THIS BRACE SO UNIQUE AND UNBEATABLE

SHOULDER STRAPS - STRAPS - FRAME: A WINNING COMBINATION

The system of shoulder straps and straps even distributes all the tension and, with help from the new lumbar orthosis, reduces the possibility of the brace shifting and makes it easier to exert the right amount of tension. The shoulder straps and straps are made from a super-strong material and attached directly to an

aluminium structure to prevent them from sagging or losing shape with wear and guarantee even, long-lasting tension. The (radiotranslucent) frame can be easily moulded to fit the shape of the patient's spine by an orthopaedic technician.

NEW SHOULDER STRAP ADJUSTMENT

Increasing the adaptability of the brace plays an important role in its stability. Now with **two new buttons** the central cross strap can be attached to the frame in the highest or lowest position to suit the shape of the patient's shoulder.

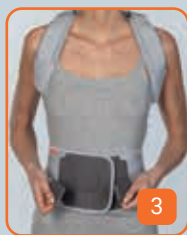

THE NEW STABILISING LUMBAR ORTHOSIS

The primary innovation offered by the new Spinalplus 2.0. With a comfortable, wraparound design, the orthosis "hugs" the sides for a cosy fit so the brace is less likely to shift, particularly when standing up after sitting down and vice versa.

To make the orthosis easier to fasten, even for patients with reduced muscular strength, a hole has been added so patients can grip the end of the orthosis, pull it tight enough and overlap it over the other end of the orthosis. If the circumference of the orthosis is too wide, just cut it to fit at the back and reposition using the Velcro provided.

EASY TO WEAR IN JUST THREE STEPS

SHOULDER STRAPS + STRAPS = EFFORTLESS OPTIMUM TENSION

A firm, compression-free fit over the shoulder. The give-and-take created by the interaction between the shoulder straps and the straps multiplies the force exerted by the patient: anyone, even a patient with little muscular strength, can wear the brace with the optimum degree of tension previously set by the orthopaedic technician. The section of the dorsal-lumbar straps where the greatest amount of tension is present is made with a low-friction tape to ensure the smoothest possible movement.

A complete line of hyperextension braces

<p>e-STAB stabil-T modular plus35K modular plus35acqua modular plus36 modular plus45</p>	Traumatic fractures (T10-L1/L2)

ITEM M22035

NEW

eSTAB

3-point hyperextension brace

INDICATIONS

- Traumatic fractures (T10-L1/L2)
- Osteoporotic or metastatic-related compression fractures of the thoracic spine and the dorsolumbar transition (T10-L1/L2)
- Osteomalacia with fractures
- Dorsolumbar osteoarthritis
- Substitute for plaster corset

FEATURES

- Structure:
 - A lightweight aluminium alloy frame without any sharp metal edges for maximum comfort.
 - Telescopic mechanism: the brace can be adjusted at the sides with the screws, without having to remove it, both vertically and horizontally.
- Pelvic band:
 - Tilting
 - Telescopic
 - The end parts are made of a resistant and flexible polymer for optimal adaptability to the anatomy of the patient
 - Grub screws allow the tilting to be secured in position at 0°, 18° or 36°
- The angle of the underarm joints can be adjusted using the notched system that corresponds with the angle of the underarm pads (every 7,5°)
- Moveable sternal plate
- Fastening system:
 - Lightweight and resistant lever, in acetal resin, with safety lock
 - Exclusive belt length adjustment system with double-pass buckle and self-locking pre-fastening system
- Anatomical dorsolumbar plate
- Removable padded parts, fixed with buttons/snaps. Made of PE foam, bi-coupled with elastane blend fabric, with water repellent treatment.

Size	1	1S	2	2S	3	3S
 Pelvic circumf. cm	50-75		75-105		105-135	
 Height cm*	41-54	30-41	41-54	30-41	41-54	30-41

* measured from the proximal side of the corpus sterni to the upper edge of the pubic bone (tuberculum pubicum)

OPTION: REF.IP35/PC Connect - Connection plate between the Cervistable collar and the hyperextensor
 REF.IP35/P Sternal hemi-plate for PaceMaker wearers
 REF.P1000/IA Underarm protection sleeve in a non-toxic hypoallergenic material

e-STAB

THE EVOLUTION OF DESIGN IN EVERY DETAIL

TELESCOPIC STRUCTURE

Frame made of a light aluminum alloy, with chamfered edges. **Allows all possible adjustments without removing the screws,** simply by loosening them.

THERMOFORMED PADDING

Without seams and gluing, they are made of bi-coupled PE foam and covered with a mixed elastane fabric, with an attractive texture.

They can be **shortened in length** (following the provided cutting lines) and then applied with **practical buttons**. Water-repellent treatment.

SHOCK-ABSORBING STERNAL PLATE

It is equipped with an antero-posterior shock absorbing system to increase **comfort on the sternum**. Can be connected to the CerviStable collar (high cervical spine injuries) using an optional metal plate.

EASY CLOSURE

The belt attaches to the frame by means of a lightweight and durable **acetal resin lever with a safety button**

PELVIC BAND WITH POLYMER TERMINALS

The pelvic band has terminals made of a flexible and resistant polymer, is **telescopic** horizontally, with numbered reference notches, and has a vertical **tilting system**. It can be shaped in the central part and locked (0°, 18°, 36°) by means of grub screws.

ADAPTABLE UNDERARM JOINTS

Their inclination can be increased/decreased (every 7,5°) thanks to the **notched system**.

PATENTED PRE ADJUSTMENT OF THE BELT

The first adjustment, on a bedridden patient, is facilitated by the self **adjusting pre-fixing system**. Once the optimal length has been determined, proceed to the final fixation.

CAN BE PUT ON IN JUST THREE STEPS

SINGLE PATIENT MULTIPLE USE

- The brace can be adjusted at the sides with screws and at the top with a telescopic mechanism (the screws do not need to be removed)
- The angle of the underarm joints can be adjusted using the notched system that corresponds with the angle of the underarm pads (7.5° increments)
- An innovative polymer spring enables the pelvic band to be tilted (it can also be secured in position at 0° and at 18° using grub screws)
- Moveable sternal plate
- A new strap with three-step adjustable length and a clip to hold any excess strap
- A plastic lever fastening with a safety lock
- The padded parts are water-repellent and can be immersed in water: PE foam covered with non-toxic synthetic leather
- The back plate can be worn horizontally and vertically

ITEM M20726 R/L

INDICATIONS

- Conservative treatment of instability after both front and back glenohumeral dislocations
- Protection during sports or working activities at risk when waiting for surgery or after stabilization surgery
- Use for shoulder rehabilitation treatment of painful hyperlaxity or functional instability
- Use three months after surgery to repair rotator cuff when starting work or sport, including when managing massive ruptures of rotator cuff

FEATURES

- BreathSkill fabric structure:
 - Soft and breathable
 - 3D fabric
- External coverage made of a strong mesh fabric
- Crossover elastics for a perfect joint stabilization
- Lateral adjustable belt; partially elastic and underarm padding
- Adjustable arm with elastics and Velcro® fastening system

shouldercross

FUNCTIONAL SHOULDER BRACE

CROSSOVER ELASTICATED SUPPORT STRAPS

Once the joint has been completely wrapped in the brace, **two crossover elasticated straps restrict movement to the desired range of motion prescribed by a physician.** Easily adjustable, each strap can be passed through the loops provided or they can both be passed through the same loop.

ADJUSTABLE ARM CUFF WITH A VELCRO® FASTENER

BREATHSKILL FABRIC BRACE

ADJUSTABLE PADDED CONTRALATERAL FASTENING STRAP

shouldercross APPLICATIONS

PREVENTION OR POST-TRAUMA

Wearing the Shouldercross for two to six hours while doing **“risky” sports or jobs** helps to stabilise the joint, reducing the incidences of dislocation and subluxation, and more importantly enables the patient to once again have the confidence to use the joint correctly.

POSTOPERATIVE CARE

When surgery is the preferred course of treatment, **Shouldercross helps to make the recovery and rehabilitation phase** much more bearable as the shoulder is supported but without the full immobilisation that often leads to the convalescence not being completed correctly.

ALL CASES

The use of Shouldercross is **highly recommended so that the patient can feel the benefit**; a benefit that will be assessed during visits with a specialist.

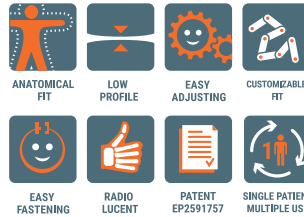

acromion 2.0

ITEM **MS1063 R/L**
PATENT **EP2591757**

Brace for acromioclavicular joint subluxation

INDICATIONS

- Conservative treatment for stabilization of acromioclavicular joint after traumatic dislocations of first-second-third degrees (at the discretion of the physician)
- Conservative treatment after fracture of far distal clavicle

FEATURES

- System designed to push clavicle downward and the humerus upward to align acromion and clavicle (exclusive)
- Anatomical, flexible clavicle brace with polyethylene foam padding and rotating joints
- Lateral strap with buckle (orange) for a rapid removal
- Adjustable, comfortable elbow and forearm support, polyethylene foam semi-rigid padding for an easy application
- Adjustable fixing belt snap (white) with Velcro® fastening system
- Rear straps with both constant and pre-set tensioning
- Velour straps, adaptable size

Item	MS1063 R · MS1063 L
Size	universal
Colour	blue

acromion 2.0

CONTRALATERAL STRAP WITH NEW HOOK FAST CLOSURE

The contralateral fastening strap is closed using the hook closure on the front end (lying on the chest) of the shoulder cap, it **facilitates putting on and removing the orthosis considerably**. Due to its orange colour it can be identified immediately. After fastening it to the shoulder cap, the Velcro® strap is closed aligning the rubber end piece and the respective orange mark on the strap (this serves as a reference point for future applications).

NEW WHITE CLIP BUCKLE CLOSURE

Fastening the waist strap is easy with the new white clip buckle closure, **thanks to its colour it is easily distinguishable and identifiable during the application procedure**. After fastening the clip buckle the strap only has to be tensioned using the appropriate Velcro®. If necessary the strap can be cut to size, removing the Y-shaped Velcro® end piece, cutting the strap to length and repositioning the Y-shaped Velcro® end piece.

RIGID CLAVICULAR CAP

The shoulder element keeps the clavicle pressed downward. It is, therefore, **flexible, but also sufficiently rigid to exert the right pressure**. It is provided with a polyethylene-foam cushion covered on the inside by a honeycomb fabric. The front end (which lies on the chest) is designed anatomically not to press excessively against the neck. The strap loops have rotating self-adjusting joints which adapt to the patient's body and allow the straps to assume the correct direction automatically.

USE AND EFFICACY OF THE SUPPORT

Thanks to its latest generation design, Acromion 2.0 maintains the joint in the correct anatomical position, in which the clavicle is pressed downward and the head of the humerus is pressed upward:

- in case of dislocation it aids the recovery of capsule and ligaments
- in case of fracture it facilitates the formation of a callus, thanks to the stabilization of the bone edges.

The duration of the treatment (associated with infiltrations/painkillers), is about 2–3 weeks; and mobility can then be restored.

EXCLUSIVE SYSTEM OF STABILISING STRAPS

Due to its exclusive system of stabilising and tensioning straps, which are adjustable in tensioning force and length, **Acromion 2.0 is the only orthosis able to press down the clavicle and to lift the upper arm** in a physiological manner. In this way it facilitates the realignment of the AC joint in case of luxation, as well as it favours the callus formation in case of distal fracture of the clavicle. It provides accurate precision and total adaptability to the anatomy of the individual patient. The adjustments are made at the time of the first application only. It will not be necessary thereafter, the right fit is guaranteed.

ITEM M90080 R/L
PATENT EP3030203

Shoulder brace with immobilizer in fixed abduction of 10°

INDICATIONS

- Post surgery (in abduction) to repair rotator cuff and soft tissue, glenoid labrum suture, capsular stabilization

FEATURES

- New exclusive tensioning system:
 - Shoulder support (rotating buckles) on homolateral/injured shoulder to ensure its physiological posture, to prevent neckache.
 - Controlateral fixing strap with orange buckle for a rapid opening.
 - Back triangle straps for scapular stability.
- Pad: high density foam with gauze fabric cover (to perfectly manage Velcro®) and fabric with silver fiber in contact with the body (anti-bacterial and odor-free)
- Length adjustable immobilizer
- Arm pocket support made of breathable material with Velcro® fastening system: easy elbow mobility.
- Adjustable abdominal strap with Velcro® fastening system and snap closing.
- Pad with front edge to improve stability. Tilted toward arm support for a better comfort
- Supporting strap for thumb and ball for rehabilitative purposes.

A NEW TELESCOPIC STAY FOR PERFECTLY CUSTOMISED ADJUSTMENTS

The lightweight aluminium alloy lateral stay is **telescopic and adjustable in two points: above and below the elbow**. Just gently pull the lever on the cuffs and slide them along the stay to the desired position to suit the size of the joint. A click indicates that it has locked into the desired hole. The system is safe and cannot be accidentally unlocked. Once the brace is carefully fitted, no more worries about cutting straps to fit.

A SIMPLIFIED NEW HINGE WITH AN ANTIRELEASE SAFETY LOCK

Made from polycarbonate, **the hinge for adjusting the flexion and extension is ever-so easy to work**: just pull the sliders outwards (white for flexion and orange for extension) and turn the disc until you reach the desired degree of flexion/extension and then push them back in. **The system is also very safe**, once the setting has been locked in, it cannot be accidentally changed by the patient if the brace knocks against something. Adjustable extension from 0° to 90°. Adjustable flexion from 0° to 120°.

ADJUSTABLE SHOULDER STRAP FOR SUPPORT

The supportive shoulder strap is **incredibly easy to adjust and wear**: just pass the Velcro end through the ring provided on the wrist, fold it back on itself and attach it to the Velcro®. Once it has been adjusted to the right length, the patient can don the shoulder strap without any assistance just by opening and closing the clip at the opposite end which attaches to the same ring. Made from soft velour, it features padded shoulder protection.

THERMOPLASTIC CUFFS

Two fixed and two mobile. The cuffs have been specially designed to **accommodate the patient's arm and forearm and immobilise them** without applying any pressure. The length of the straps can be easily adjusted: just remove the Y-tab, cut off any excess, and reattach the tabs to the ends.

THERMOFORMED PADDING

Made from bonded MTP, the thermoformed padding **guarantees a comfortable fit and prevents any annoying irritations** from occurring anywhere on the skin.

ITEM **MT1032 R/L**

Semi-rigid corset for the sacroiliac joint

INDICATIONS

- Sacroiliac joint (SI) pain or dysfunction
- Arthrosis of the sacroiliac joint
- Symphysis Pubis Dysfunction (SPD) (after childbirth)
 - Note: in this case do not use the padded pads

FEATURES

- Innovative tensioning system with pulley technology for optimum stabilisation and for simple application minimal effort required
- Firm, non-deformable and breathable fabric for safe hold, with edges in anti-irritation material. Particularly light
- The large Velcro® fastening enables the tensioning strap to be simply secured in a simple way and to the desired compression
- Reinforced paravertebral area
- Two padded pads that can be positioned differently thanks to the surfaces of Velcro® closure, designed to allow targeted compression

Brace for hip and coxalgia

INDICATIONS

- Post-arthroscopy care.
- Post-surgical care (compatible with the degree of stabilization required).
- Conservative treatment of hip dislocations.
- Arthrosis of the hip joint.
- Coxalgia or inoperable joint misalignment

FEATURES

- Made of breathable AirX™ fabric
- Lateral and anterolateral spiral support stays
- Front Velcro® fasteners
- Colour-coded Velcro® areas for fastening the straps
- Elastic calibrated rods, with lateral crossing, for:
 - Prevention of excessive adduction
 - Partial limitation of flexion-extension
- Gel Insert to prevent oedema
- A rigid bar that locks the joint in flexion and neutral abduction during the initial days following a dislocation
- M91007N - Adjustable (telescopic) rod for Hipocross 2.0:
 - restrict extension (0° to 120° in 10°-increments)
 - restrict flexion (0° to 120° in 10°-increments)
 - regulate adduction.

hipocross 2.0

**ALREADY A WINNER,
BUT EVEN BETTER
FROM TODAY:
3 ABSOLUTE
INNOVATIONS**

**INNOVATION 1:
VELCRO® FASTENING
SYSTEM FOR THE
STRAPS ON BOTH
THE THIGH AND
THE HIP BONE**

The Velcro® allows quick and millimeter precision fastening.

**INNOVATION 3: ONLY 3 FITS
FOR ANY REQUEST**

The versatility of the brace reduces the need to have to keep stocks in stock, knowing nonetheless that every client's request will be satisfied

Size	S	M	L
Pelvis circ. cm	72/104	104/137	137/170
Proximal thigh circ. cm	40/58	54/74	68/90

**X-SHAPED TIE
RODS ON THE
SIDE FOR EASY
ADDUCTION**

The 2 robust rods that cross on the side allow the dynamic adjustment of the adduction

**INNOVATION 2:
TELESCOPIC
AND ARTICULATED
ROD**

- Allows numerous regulations:
- Height, by sliding the two segments to the desired measurement.
 - Adduction, thanks to the joint present at trochanteric height
 - Flexion-extension, through a special graduated joint (from 0° to 120°).

RIGID BAR

A rigid bar that locks the joint in flexion and neutral abduction during the initial days following a dislocation.

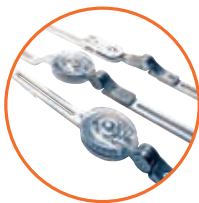

**ANTI-EDEMA
CONTAINMENT
FABRIC AND
CRYOTHERAPY GEL**

The compression exerted by the combination of the special containment fabric and the gel (that has to be inserted in the pocket in the area of the hip), help the reabsorption of the edema. The gel is cooled in the freezer

kafo

Lower leg extension for hip orthosis Hipo

ITEM M2320 R/L
ITEM M2321 R/L

INDICATIONS

- Kafo is an additional device which guarantees the control over minimal rotation movements for the hip orthosis Hipo, in this way it ensures that the joint stays in a natural position

FEATURES

- Improves patient's wearing comfort: lightweight materials, comfortable brace
- The monolateral design reduces the complications of bedsores, especially in geriatric patients
- Reduces the risk of dislocation
- Maintains the natural position of the limb during hip flexion
- Guarantees optimal control of the flexion-extension, abduction and intra / extra rotation of the hip

ITEM M33108

Tubular knee brace with spiral stays and patella stabilizer

INDICATIONS

- Early stage knee pain or effects after sprain trauma with mild residual collateral ligament laxity (non-operative knee)
- Mild mid-lateral patella instability
- Patellofemoral arthrosis

FEATURES

- Structure made of BreathSkill:
 - soft and breathable
 - 3D fabric
 - high resistant mesh

ANATOMICAL FIT

BREATHABLE

LOW PROFILE

3D FABRIC

SINGLE PATIENT MULTIPLE USE

- FlexSkill front support (bi-layer technical fabric) with special low-profile anti-irritation welding seam
- Patella stabilizer
- CompresSkill back support:
 - Stretchy multi-fiber and compression material
 - Ultra-low profile anti-irritation for better comfort (knee flexion)
 - Fully adaptable
 - Perfect adherence
- Medial and lateral stays to keep brace correctly positioned.
- Upper and lower stabilizing straps:
 - Symmetrical fastening system to avoid brace rotation when fastening
 - Articulated central buckle for "automatic" adaptation to leg
 - Rubber tab for easy Velcro® opening

Knee orthosis for post-surgery with graduated movement, wraparound

ITEM **MG1043**

INDICATIONS

- Post-surgery for the protection of knee flexion and extension (ligament reconstruction, transposition of the anterior tibial apophysis, fracture of the distal third of femur, fractures of proximal third of tibia, fractures of patella, tendon injuries of extensor system)
- Post-traumatic stage of knee sprains
- Valgization and varization osteotomies

EASY ADJUSTING

CUSTOMIZABLE FIT

SINGLE PATIENT MULTIPLE USE

FEATURES

- Valves with strap-loops and structural hook-and-loop system
- Non-metallic adjusting joint, light and intuitively adjustable
- Flexion: from 0° to +120° with intervals of 10°
- Extension: from -10° to +60° with intervals of 10° possibility to lock joint from 0° to +60° with intervals of 10°
- Removable and washable condyle protection pads
- Structure with hinges made of light aluminum alloy
- Possibility of shortening brace through marks on the hinges
- MTP Pads to limit brace migration and protect leg from direct contact with hinges
- Lined only externally, cuttable and perfectly adaptable to leg circumference

go up pcl

Knee orthosis for post-surgery with graduated movement, PLC version

ITEM MG1044

INDICATIONS

- Post-surgery when knee flexion and extension need to be limited and controlled (PLC ligament reconstruction)
- Post-traumatic stage of knee sprains

INDICATIONS

- Inflatable retro-tibial pad to relieve pressure on PCL
- Non-metallic adjusting joint, light and intuitively adjusted
Flexion: from 0° to +120° with intervals of 10°
Extension: from -10° to +60° with intervals of 10°
Possibility to lock joint from 0° to +60° with intervals of 10° structural hook-and-loop system (not bonded Velcro®)
- Frame of hinges made of light aluminum alloy
- MTP Pads to limit brace movement and protect leg from direct contact with hinge; lined only externally, cuttable and perfectly adaptable to leg circumference
- Front and back straps to ensure the stays position along the median line of leg
- Removable and washable condyle protection pads

Inflatable retro-tibial pad to relieve pressure on PCL

pluspoint 4

Functional knee orthosis

ITEM M33040 R/L
PATENT EP3492050

INDICATIONS

- ACL, MCL, LCL, PCL instability and ruptures, combined instability
- Complex instabilities of knee, traumatic or degenerative
- Pre/Post-surgery both rehabilitative or conservative
- Ligament protection during sports

FEATURES

- New anatomical design for a perfect adherence
- Innovative frame made of a special aluminum alloy, light and stable, adjustable (facilitating modeling on thigh and calf). Matt black painted.
- New buckles (individually removable) made of special and flexible foam with anti-rotation system to apply the brace with ease;
- New reinforced Velcro® straps and divided for better adaptation
- MTP pads made of soft velveteen with no adhesive and no seem
- New and ultra-low profile for polycentric CLICKCLACK joint easy to adjust using wedges WITHOUT any tool:
Extension: 0°, 10°, 20°, 30°, 40°
Flexion: 45°, 60°, 75°, 90°
Block: 0°, 10°, 20°, 30°
- Pre-installed anatomic medial condyle pad to provide excellent stability
- Two sets of condyle pads of different thicknesses are included
- Internal frame pad (removable for cleaning) with low profile clickclack to ensure safe positioning.
- Hypoallergenic, anti-migration and multi-grip material

pluspoint 4

KNEE ORTHOSIS WITH 4 PUSH POINTS

STRUCTURE WITH 4 PRESSURE POINTS

- F1 = force applied anteriorly and proximally to the thigh (metal structure)
- F2 = force exerted posteriorly and distally on the leg (metal structure); thanks to this thrust it provides the "preload"
- F3 = force on posterior and distal thigh (belt)
- F4 = force applied anteriorly and proximally to the leg (strap)

CLICKCLACK: THE NEW SUPER-FAST AND SCREWDRIVER FREE EXTENSION AND FLEXION ADJUSTMENT SYSTEM

Pluspoint 4 features the new extension and flexion adjustment system.

Just open the hinge by sliding the two covers to the side, remove the stops holding the wedges in place and replace these wedges to provide the degree of flexion or extension prescribed by the physician. Then just secure the wedges with the stops and slide the covers back into place until they "click".

ITEM **M22040 R/L**
PATENT **EP3492050**
US10548758

FEATURES

- Frame:**
- Light-weight and resistant, made of a special aluminum alloy, adjustable (facilitated modeling on thigh and calf)
 - New anatomical design for a perfect adherence
 - Front socket for easy fit (no need to put the brace on from the foot)
 - Polycentric CLICKCLACK joint with an ultra-low profile, easy to adjust using wedges WITHOUT any tool:
 - Extension: 0°, 10°, 20°, 30°, 40°
 - Flexion: 45°, 60°, 75°, 90°
 - Block: 0, 10°, 20°, 30°
- Fastening system:**
- Locking buckles with safety button to wear the orthosis without using the Velcro® fastening system (adjusted only at the first application)
 - Divided and reinforced Velcro® straps for better adaptation
 - Soft velveteen straps in MTP padding, seamless and with no adhesives
- Padding of the frame:**
- Hypoallergenic, anti-migration, and multi-grip material
 - Low profile clickclack to ensure safe positioning (removable for cleaning purposes)
 - Extra-thickness along the calf for optimal comfort
 - Pre-installed anatomic medial condyle pad to provide excellent stability
 - Two sets of condyle pads of different thicknesses are included

pluspoint FAST

**NEVER BEFORE
HAS A KNEE
BRACE BEEN SO
EASY TO WEAR**

THE ALL-TIME BEST SUPPORT FOR THE KNEE

Designed to support knee instability or torn ligaments, it represents a first choice brace for **any instability of the knee**, whether it is due to traumatic or degenerative reasons. Recommended for both **preop and postop phases**, as a conservative treatment or as **preventive protection**.

FRONT FIT

The Pluspoint Fast knee brace is put on from the front without having to insert the foot. This feature makes it extremely **practical and easy to use**.

CLICKCLACK JOINT

It adjusts the flexion-extension by means of wedges, **without the need of any tool** (screwdriver or allen wrench). Polycentric and with a very low profile, you open it, adjust it, and close it.
Extension: 0°, 10°, 20°, 30°, 40°
Flexion 45°, 60°, 75°, 90°
Blocks at 0°, 10°, 20°, 30°.

THE STRAPS ARE INCREDIBLY EASY TO FASTEN

The straps don't need to be removed and reinserted every time, because they fasten with **small levers**, which maintain the regulation made on the first application

SHAPABLE

ANATOMICAL FRAME WITH FRONT FIT

Made of a **special aluminum alloy**, it is shapable, especially on the shine grip and thigh. The **front fit** makes it easy for the patient: fast and intuitive to wear.

EFFICIENCY OF THE 4 THRUST POINTS

The 4 thrust points system, guarantees efficient support, providing optimal stabilization of the knee.

THERMOFORMED PADS

Internally (where in contact with the skin) they are covered with a hypoallergenic and non-slip fabric, which has a modern texture design **externally**. **Fastens** with low-profile snaps that are easily removed to clean the brace.

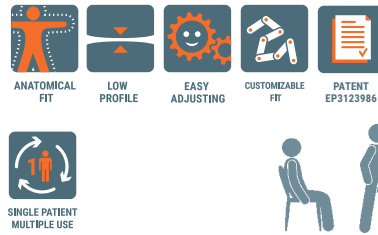

KOA

ITEM **M20014 R/L**
PATENT **EP3123986**

Orthosis for gonarthrosis

INDICATIONS

- Moderate unicompartmental gonarthrosis
- Post-surgery cartilage or meniscus treatments

FEATURES

- Patented strap system:
 - effective single-sided reduction of compression using a three-point system of load
 - the system comes into operation when required: decreased pressure when sitting and tension when standing
 - easy adjustable tension using winch system
 - easy regulation
- Stretchy PlusComfort fabric: cotton inside for a maximum comfort and polyester outside for maximum resistance
- Light foam valves adaptable to leg with buckles locking system
- A single-sided stay made of light aluminum alloy with limit extension of 0°, 10°, 20°, 30°, 40° and flexion of 45°, 60°, 75°, 90°
- Fixing buckles with built-in blocking pull for easy tension, magnet to secure pull after using it.
- Technogel condyle pad to dissipate pressure of straps
- Y Velcro® easy-to-adjust straps
- Thigh and calf straps with stretchy element for better comfort when moving and movable pad with Velcro®

ORTHO-A

ITEM **M91014 R/L**

Orthosis for gonarthrosis

INDICATIONS

- Moderate unicompartmental gonarthrosis
- Post-surgery cartilage or meniscus treatments

FEATURES

- Light structure made of foam and aluminum alloy
- Single-sided hinge for improved and effective brace application. Lever mechanism to relieve mid-lateral knee
- Hoop-and-look straps to apply the brace without using Velcro® straps (first setting)
- Soft, removable and washable pads
- Included accessories:
 - Additional condyle pad;
 - wedges to limit extension of 0°, 5°, 10°, 15°, 20° or 25° and flexion to 45°, 60°, 75° or 90°
- Double regulation joint of medial and lateral load
- Locking buckles with safety button

Item	M91014 R/L	
Size	Universal	
Colour	grey	

specify right or left

RIGHT = for medial gonarthrosis of the right knee (varus right knee) or for lateral gonarthrosis of the left knee (valgus left knee).
LEFT = for medial gonarthrosis of the left knee (varus left knee) or for lateral gonarthrosis of the right knee (valgus right knee).

ORTHO-A

ORTHOSIS FOR GONARTHROSIS

LIGHT STRUCTURE MADE OF FOAM AND ALUMINUM ALLOY

Two super-strong yet lightweight materials working together to **facilitate joint realignment and pain reduction.**

WEDGES TO LIMIT EXTENSION AND FLEXION

It limits flexion and extension to the degree prescribed by the orthopaedic surgeon.

FOAM PAD

Soft against the skin, the hypoallergenic pad remains securely in place. **Easy to remove and wash in lukewarm water.**

FOUR NUMBERED PADDED STRAPS

To facilitate closing.

DOUBLE REGULATION JOINT OF MEDIAL AND LATERAL LOAD

It enables the brace's condyle pad to be moved medially or laterally to create the **right amount of "force"** on the joint needed to correct its position.

LOCKING BUCKLES WITH SAFETY BUTTON

Never lose the correctly adjusted length of the straps and always **have just the right amount of tension with minimal effort.**

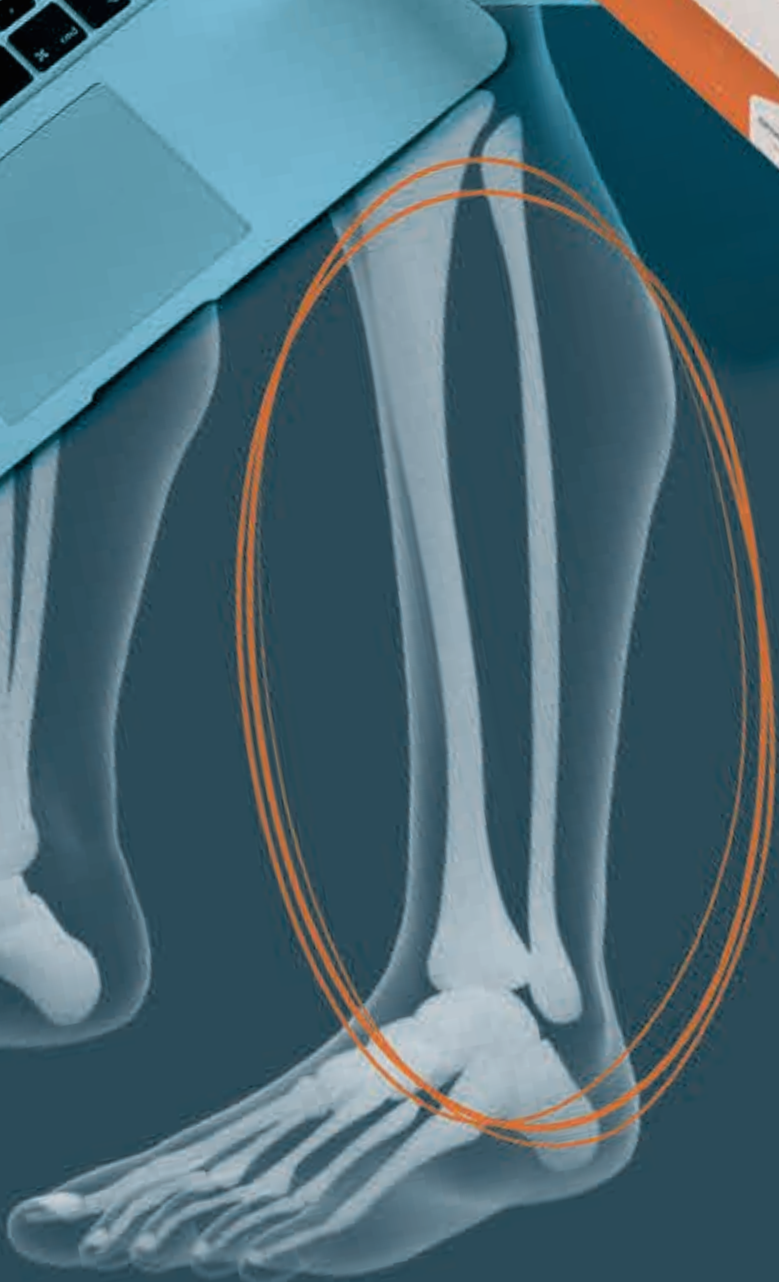

HOW GONARTHROSIS WORKS

Medial OA „varus“ or bowleg adjustment (80%)

Lateral OA „valgus“ or adjustment in affected knees (20%)

airstep walker short

ITEM M510

Walker with inflatable air padding

INDICATIONS

- Soft tissue injuries
- Mild to severe ankle sprains
- Injuries and pain in the forefoot, foot, and heel
- Stable fractures in the foot and/or ankle
- Post-surgical care

CONTRAINDICATIONS

- The application of this brace is advised only when it is documented that the fracture is stable and there are acceptable limits of angular and rotational misalignments

FEATURES

- Reinforcing shells on the front and back, for increased stability
- Inflatable air pads for optimum fit to the limb and improved stability
- Structure in lightweight, sturdy plastic

airstep tight walker diabetic

ITEM M520

Walker with two inflatable air padding and Diabetic Set

INDICATIONS

- Particularly suited for use with patients with sensitivities, for example, diabetes mellitus and the associated diabetic foot syndrome
- Ulcers on the metatarsal, malleolus, heel or hallux
- Charcot foot

CONTRAINDICATIONS

- The application of this brace is advised only when it is documented that the fracture is stable and there are acceptable limits of angular and rotational misalignments

FEATURES

- Adaptable foam inserts for partial pressure relief from the sole
- Special stockings for diabetes mellitus and the associated diabetic foot syndrome
- Front reinforcement shell for stable hold of the foot
- Optimum wearing comfort thanks to two individual inflatable air pads in the inner shoe
- Basic body made of durable, light plastic
- Comfortable wear, thanks to the foam padding
- Correct fixing thanks to the circular Velcro® fastening
- Optimized tilting sole
- Optional padding for further adaptation to the leg
- Diabetic set included

carbon afo

ITEM MKTAFO R/L

Carbon-fibre ankle foot orthosis

INDICATIONS

- Limping foot
- Ictus
- Multiple sclerosis
- Neurological illnesses
- Amputation of forefoot

CONTRAINDICATIONS

- Macroscopic deformity of the foot and ankle
- Acute edema
- From moderate to severe spasticity
- Contracture of front and rear tibial muscles, that cannot be healed with the simple apparatus posture

FEATURES

- Spiral structure for resistance and elasticity; pre-loaded to provide constant support to the foot
- Structure in reinforced carbon fibre for excellent support. Sole in thin carbon fibre, that can be adapted to different shoes
- Light
- Calf Velcro® closure, with return loop
- Calf padding in MTP finished in technical fabric in contact with the body
- Washable

carbon afo

THE FLEXIBLE, LIGHTWEIGHT SOLUTION FOR A SMOOTHER GAIT

THE COMBINED ACTION OF MATERIALS AND DESIGN

The Carbon afo brace has been designed to help people with walking difficulties to walk more easily. With a **lightweight design and thin profile**, the brace is particularly easy to wear and enables patients to walk dynamically, symmetrically and smoothly

“UNIVERSAL” THIN SOLE

Also made from carbon fibre, the sole supports and carries the foot through **every phase of walking**.

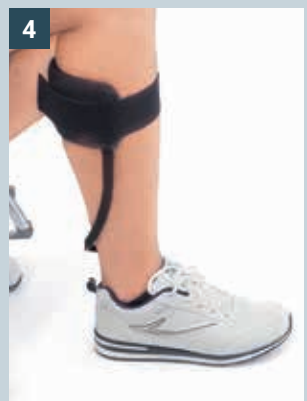

REINFORCED CARBON FIBRE

The entire brace is made from reinforced carbon fibre, which is renowned for its **incredible strength and minimal weight**. This means a guaranteed combination of maximum strength and ultra-lightness

PRELOADED, TILTED SPIRAL DESIGN

To help you walk more smoothly, the support structure features a spiral, preloaded design, so **it works like a “spring”** that encourages the foot to be raised immediately and correctly

Easy to don and even easier to wear

afo light

Ankle foot brace

ITEM M9050 R/L

INDICATIONS

- Foot drop
- Light to moderate spastic equinus

FEATURES

- Polypropylene structure with rounded edges
- Soft padding for protection of the tibia and the calf (MTP padding, with light velour covering on both sides)
- Velcro® fastening strap at calf height
- Thermoformable
- Velcro® fastening on the instep

podifer 20

ITEM M90020

Phlebological insole with transverse reinforcement

INDICATIONS

- Vasculopathy
- Flatfoot or cavus foot
- Metatarsalgia

FEATURES

- Top layer of fabric made with woven silver threads with natural anti-bacterial and odour-inhibiting effect
- The middle visco-elastic layer with form memory effect, in an optimised thickness, aids venous return thanks to the pump effect
- The bottom layer is made of PU and acts as a protective layer for the layers above, providing protection against wear and deformation. It also makes it easier to position the insole in footwear
- Lower shell made of rigid PU for the stabilisation and support of the foot in prone supination
- The presence of the transverse reinforcement supports the metatarsals and cushions floor impact, in addition it strengthens the pump function of the insole, improving the venous return and, at the same time, stimulating the reflex zones for heart and lungs

Item	M90020

Rheumatic insole

INDICATIONS

- Hammer toe, in the initial stages
- Bunions, in the initial stages
- Arthralgia
- Metatarsalgia
- Flatfoot or cavus foot

FEATURES

- Top layer of fabric made with woven silver threads with natural antibacterial and odour-inhibiting effect
- The special EVA layer automatically shapes itself according to the pressure it is exposed to, filling out the areas exposed to lower pressure, thus ensuring increased wearing comfort
- The middle visco-elastic layer with form memory effect, in an optimised thickness and with shock absorbing function
- The bottom layer is made of PU and acts as a protective layer for the layers above, providing protection against wear and deformation. It also makes it easier to position the insole in footwear
- Lower shell made of rigid PU for the stabilisation and support of the foot in prone supination

ITEM M90050

Cushioning insole with transverse reinforcement

INDICATIONS

- Inflammation of the heel
- Plantar fasciitis
- Flatfoot or cavus foot
- Metatarsalgia

FEATURES

- Top layer made of PA and elastane, special fabric with sections containing higher thread densities in order to increase resistance to wear
- The Podo-Dry felt protects the health of the foot by leading sweat externally
- The middle visco-elastic layer with form memory effect, in an optimised thickness and with shock absorbing function
- The bottom layer is made of PU and acts as a protective layer for the layers above, providing protection against wear and deformation. It also makes it easier to position the insole in footwear
- Lower shell made of rigid PU for the stabilisation and support of the foot in pronation and supination
- The presence of the transverse reinforcement supports the metatarsals and cushions floor impact, in addition it strengthens the pump function of the insole, improving the venous return and, at the same time, stimulating the reflex zones for heart and lungs
- Shock absorbing material in the heel region to cushion when setting the heel down

Motorised trainer for passive mobility

ITEM M4KM-500

INDICATIONS

- General Rehabilitation
- Gymnastics for the elderly
- Supporting action for venous pump and lymphatic drainage
- Exercise which complements traditional kinesiotherapy in severe forms of chronic and progressive disabilities

FEATURES

- Anti-spasm device with rotation activity block and acoustic signal
- Electronic control device with on-board computer
- 4 levels of pedaling speed adjustment: 15 cycles / min (low) - 30 cycles / min (medium-low) 45 cycles / min (medium-high) - 60 cycles / min (high)
- 5 levels of duration adjustment: 3-6-9-12-15 min
- 2 types of movement selectable: pedaling forwards and backwards, with 2 second pause for change of direction
- Operation with easy-to-fix knobs and pedals
- Adjustable pedalling radius: 13 cm (long user) - 11 cm (average user) - 9 cm (short user) based on the height of the user
- Tachometer
- Calorie counter
- Countdown
- Pre-programmed exercise function

ORTHO 14

ORTHO 14-100

ITEM MOFT100

Soft foam cervical collar (pediatric)

INDICATIONS

- Slight cervical spine distortions (whiplash)
- Stiff neck
- Neck-induced vertigo

FEATURES

- Core made of semi-rigid foam
- Tubular jersey cover
- Velcro® fastening at back of neck
- X-ray transparent

Item	MOFT100
Size	universal
Height cm	6,5
Circ. cm	20/30

ORTHO 14-105

ITEM MOFT105 I/P

Bivalve cervical collar with tracheal hole (pediatric)

INDICATIONS

- Medium severity to severe distortion of the cervical spine (whiplash)
- Multiple discopathies of the cervical spine
- Cervical spine traumas

- Pathological instability as a result of cervical spine metastasis
- Support of Post-surgical spinal surgery care

FEATURES

- Non-toxic PLASTAZOTE® structure
- Consists of two enveloping valves with Velcro® closure
- Central front and back rigid support plates
- Radiolucent
- Shaped for perfect fit at chin, neck and shoulders
- Tracheal hole

Item	MOFT105I	MOFT105P
Size	Kids 0 – 3 years old	Kids 4 – 9 years old

ORTHO 14-305

ITEM MOFT305

Immobilizer for arm and shoulder, with elbow support (pediatric)

INDICATIONS

- Compound humerus fracture
- Glenohumeral subluxation
- Shoulder sprain

- Post-surgical care of humeral fractures and interventions on humeral subluxations
- Postoperative care of the long head of the biceps tendon

FEATURES

- Cotton blend fabric sling
- Soft padded fabric immobiliser swathe
- Shoulder straps with Velcro® fastenings
- Elbow support

Item	MOFT305
Size	universal
Length bag	23 cm
Hight	22 cm

fits right and left

ORTHO 14-310

ITEM MOFT310

Arm sling (pediatric)

INDICATIONS

- Forearm and wrist support aid
- As support in cases of cast limb
- Useful if resting of the acromioclavicular (after a subluxation grade 1) or glenohumeral

Item	MOFT310
Size	universal
Length bag	24 cm

fits right and left

- joint is required
- Useful in case of immobilisation of the upper arm with the elbow in flexed position

FEATURES

- Structure made of cotton blended fabric
- Velcro® fastening
- Shoulder strap with neck protection padding

ORTHO 14-315

ITEM MOFT315

Clavicle splint (pediatric)

INDICATIONS

- Clavicle fractures
- Subluxation of the acromionclavicular joint

Item	MOFT315
Size	universal

fits right and left

FEATURES

- Made of gauze fabric with padding
- Applied similarly to the figure of eight bandage with Velcro® closure at the back

ORTHO 14-500

ITEM MOFT500 R/L

Wrist immobilizer (pediatric)

INDICATIONS

- Wrist sprain
- Compound fracture of the radius and ulna extremities
- Wrist tendonitis
- Consequences of fracture of the wrist or after early removal of the plaster

Item	MOFT500 R/L
Size	universal
Length cm	15,5

specify right or left

FEATURES

- Aluminium palm splint, preformed and pliable (removable)
- Double-lined foam design
- Reinforcing dorsal stays
- Fastening with Velcro® straps and buckles

ORTHO 14-502

ITEM MOFT502 R/L

Wrist immobilizer with thumb grip (pediatric)

INDICATIONS

- Wrist sprain
- Wrist tendonitis
- Consequences of wrist fracture or after early removal of the plaster
- Damage to ulnar section of metacarpophalangea of the thumb

Item

- Structure made of double-lined soft foam
- Internal lining in terrycloth
- Rigid but moldable medial, side and back rods made of light metal alloy
- Adjustable supporting plates, inside and lateral
- Patella opening

ORTHO 14-800

ITEM MOFT800

Bivalve ankle brace (pediatric)

INDICATIONS

- Grade 2 and 3 sprains
- Functional recovery phase after surgical treatment
- Functional recovery after malleolar fractures
- Chronic instability of TT and sporting activity

Item

MOFT800

Size

universal

Height cm

16

fits right and left

FEATURES

- Double-lined foam padding
- Anatomically shaped lightweight durable plastic bivalve structure
- Velcro® adjustment to fit heel width
- Easy to wear thanks to full opening

ORTHO 14-805

ITEM MOFT805

Walker (pediatric)

INDICATIONS

- Conservative treatment of malleolar fractures
- Severe sprains grade 3
- Post-surgical phase after osteosynthesis of ankle fractures, stabilisation of ligament injuries of the ankle and Achilles tendoni

Item	MOFT805		
Size	M	L	XL
Shoe size	23/25	26/28	29/31
Height from ground cm	22	25	27

fits right and left

- Stable foot, ankle, tibia and distal fibula fractures

FEATURES

- Structure made of lightweight, durable plastic
- Non-slip rubber sole
- Inner padding of the sole is made of nontoxic Evazote®
- Struts held in place with Velcro® for a firm grip on the padding
- Soft foam pad with double lining in brushed nylon for Velcro® fastening
- Velcro® fastening straps

ORTHO 14-810

ITEM MOFT810
ITEM M9391 R/L

GENERAL TERMS OF SALES

1. Entire Agreement

This document contains all of the terms and conditions relating to the purchase of goods and/or services (collectively, "Goods") by ORTHOSERVICE AG and its affiliates ("Buyer"), from the supplier identified herein ("Seller") and constitutes a legally binding agreement between ORTHOSERVICE AG and Seller ("Agreement"). Buyer and Seller are individually referred to herein as a "Party" and collectively as the "Parties".

2. Orders

From time to time Buyer may submit an order ("Order") for Goods with Seller. Any Order submitted by Buyer to Seller shall be subject to and deemed to incorporate the terms and conditions of this Agreement. Unless agreed to in writing by a duly authorized representative of Buyer, Buyer objects to, and is not bound by, any term or condition that differs from or adds to Buyer's Order or the terms and conditions herein. Commencement of performance by Seller or shipment of any part of the Goods covered by an Order shall be deemed to constitute assent to the Order and the terms and conditions herein.

3. Price

Buyer shall pay Seller the price for the Goods shown in the Order. The price is firm and not subject to increase without Seller's prior written communication. Price will be displayed in the Order Confirmation of Seller for final approval of Buyer.

4. Taxes

Unless specified in an Order, the prices stated do not include sales, use or similar taxes directly applicable to the Goods sold to Buyer. Notwithstanding the foregoing, Buyer shall only be responsible for such taxes when Seller is required by law to collect such taxes from Buyer. Such taxes shall be separately stated on Seller's invoice. Seller shall not add such taxes to Buyer's invoice if Buyer has furnished a valid tax exemption certificate to Seller.

5. Payment

Unless otherwise stated in the Supplier Information document attached hereto or different agreement, Buyer shall prepay Seller the price for the Goods. Seller shall send Buyer a detailed invoice for each Order. Buyer shall make payment to Seller by electronic funds transfer.

6. Delivery

Seller shall deliver Goods in accordance with the schedule in Buyer's Order. Time is of the essence in the performance of the Order. Buyer may select the mode of transportation and the carrier for the Goods. Seller shall pre-pay shipping charges and add such charges as a separate line item on the invoice, unless otherwise agreed in writing. If Buyer requests that Goods be shipped "collect", Seller shall use a Buyer approved transportation carrier and Buyer shall not pre-pay shipping charges. Seller shall be responsible for excess transportation costs resulting from any deviation from Buyer's shipping instructions. If, prior to the delivery of the Goods, Seller has reason to believe that it will be unable to meet the schedule in Buyer's Order, Seller shall immediately notify Buyer in writing, indicate the cause of delay, and use its best efforts to cure the anticipated delay. Upon receipt of notice of the anticipated delay or upon occurrence of an actual delay in performance, Buyer may (i) direct expedited shipment of the Goods with excess costs paid by Seller, or (ii) cancel the Order. Buyer may return at Seller's expense Goods delivered early to Buyer. Goods shall be delivered by Seller to the delivery location specified in the Order or, if delivery location is not specified in the Order, then to Buyer's place of business from which the Goods were ordered. Risk of loss of the Goods while in transit is regulated by the usual international European regulations.

7. Packing

The Goods to be furnished on the Order shall be suitably packed to protect the Goods from damage, prepared for shipment to secure the lowest transportation rates possible (unless a premium shipment method is specified on the Order) and comply with carrier

regulations. No charges shall be allowed for packing, crating, expedited shipping or cartage unless authorized on the Order.

8. Returns

Seller applies merchandise return policies for defective goods only after Seller investigation and written confirmation, which do not comply with European Community standards regulation, and/or for deliveries of products different from the order. In this case only, the cost of transport is belonging to the Seller.

For any other reason for returning the goods, mediation between the seller and the buyer is desirable, but in any case, acceptance of the return remains at the discretion of the Seller and at the buyer's transport costs.

9. Warranties

Seller warrants that all Goods delivered pursuant to an Order shall strictly conform to the terms, conditions, specifications, descriptions, drawings and data specified in the Order or furnished herewith and shall be of good design, material, and workmanship, free from defects, merchantable and fit for their intended purpose and shall meet applicable governmental safety standards.

Seller further warrants that Buyer will have free and clear title to the Goods furnished on the Order and the right to sell such Goods at the time of delivery to Buyer. All Goods shall be new and unused (unless otherwise specified in the Order) at the time of delivery to Buyer. Seller shall also, without any additional charges, assign or otherwise transfer to Buyer all warranties on Goods and services incorporated into the Goods sold on the Order. All warranties herein mentioned shall survive any intermediate or final inspections, delivery, acceptance or payment by Buyer, and all such warranties shall run to Buyer, its successors, assigns, customers, and users of the Goods. No warranties hereunder shall be deemed disclaimed or excluded except in writing signed by an authorized representative of Buyer. If Buyer deems the Goods defective, Seller, at Buyer's election, shall promptly repair or replace the defective Goods, or give Buyer a credit or refund for the price paid for the defective Goods, at any time within Seller's standard European warranty period for the Goods. Alternatively, Buyer may repair defective Goods at Buyer's facility and charge Seller the reasonable cost thereof. Seller shall be responsible for all shipping charges (both to and from Seller's facility) for Goods which are repaired or replaced by Seller.

10. Order Modification

Buyer may at any time, by written notice to Seller, make changes in the specifications, quantities, delivery schedules and shipping instructions in an Order.

Seller will notify Buyer within 10 days if any such change increases or decrease Seller's cost of performing the Order or the time required for its performance in which case an equitable adjustment shall be agreed upon by the Parties. Any stenographic or clerical errors of Buyer in any Order are subject to correction by Buyer.

11. Order Termination

Buyer may at any time terminate for its convenience Seller's performance of an Order, in whole or in part, by written notice to Seller, whereupon Seller shall terminate its performance on such date of notice. If Seller has commenced performance of the Order, Buyer shall negotiate reasonable termination charges with Seller. Seller shall use best efforts to mitigate its losses as the result of any Order termination by Buyer. Buyer may terminate an Order for default with respect to all or any part of undelivered Goods if Seller (a) does not meet the delivery or performance schedule specified in the applicable Order, (b) breached any terms hereof, including warranties, or (c) becomes insolvent or commits or becomes subject to an act of bankruptcy.

12. Set-Off

Buyer may set off any amount Buyer owes to Seller against any amount that Seller owes to Buyer.

13. Infringement

Seller shall indemnify Buyer for any losses, costs, damages and expenses (including court costs and attorneys fees) arising from a claim of infringement of any intellectual property right of a third party relating to any of the Goods delivered. Seller shall defend or settle, at its own expense, any lawsuit or proceeding brought against Buyer by a third party for such infringement. Furthermore, in the event Buyer should be enjoined from the use or sale of the Goods as a result of such lawsuit or proceeding, Seller shall pay all Buyer's costs and expenses including consequential damages and at Buyer's option shall: (a) procure the right for Buyer to continue using and selling the Goods at Seller's expense; (b) replace the Goods with non-infringing Goods at Seller's expense; and/or (c) remove the Goods from Buyer's premises and refund to Buyer the amount paid for the Goods. The provisions of this paragraph shall not apply to any claims, demands, lawsuits or injunctions brought by a third party where the Goods have been manufactured by Seller in accordance with Buyer's specific instructions, specifications, designs or drawings.

14. Indemnification

Seller shall indemnify Buyer from and against any and all losses, costs, damages, and expenses (including court costs and attorneys' fees) arising from any claims against Buyer for (i) injury or death to any individual, or damage to property, alleged to have been caused in whole or in part by defective Goods furnished by Seller or by any act or omission, negligence or otherwise, of Seller or any subcontractor of Seller or of any of their respective employees, workmen, or agents, or (ii) Seller's breach of its warranties and obligations hereunder. Seller will be exempted from any indemnification of the Buyer or any injury, death, or loss caused exclusively by the negligence or willful misconduct of Buyer.

15. Regulatory

Buyer is a medical device manufacturer and is required to comply with different governmental regulatory requirements. If requested by Buyer, Seller agrees to allow Buyer and/or its representatives to conduct an onsite supplier audit of Seller's facilities in connection with Buyer's regulated operations. Alternatively, Buyer may elect to send Seller a mail-in audit which Seller agrees to complete and timely return to Buyer. Seller agrees to cooperate with Buyer in any such audit or any follow up to such audit.

16. Compliance with Laws

In the performance of work hereunder, Seller shall comply with all applicable international, federal, state, and local laws, rules and regulations.

17. Regulation (EU) 2017/745 [MDR]

In case of Medical Devices (MD) the Seller agrees to supply only Goods fully complying with MDR 2017/745 (and its modifications) providing, at Buyer's request, all technical documentation (i.e. EU Declaration of Conformity, Reach / RoHS / Oeko-Tex declarations, instructions, extract of the technical dossier, etc) and all other information useful in order to avoid a misuse by the final Consumer and grant fully compliance to all regulatory duties. Signing this contract the Seller confirms he will supply only Goods manufactured without using raw materials, substances of very high concern (SVHC), semi-finished products and/or other components who may constitute an effective risk/danger (individually or as a whole) according to Regulation (EC) 1907/2006, EN ISO 10993, MDR 745/2017 and their modifications. Every single package must be labeled by the Seller accordingly with MDR 745/2017 using the information, layouts and instructions provided by the Buyer. Non complying Goods will be automatically rejected once the Buyer, during the quality checking of incoming goods, has identified them informing immediately the Seller who'll be in charge for quickly activating the restitution process and replace (at his own expense) the products as soon as possible. In this case, the purchasing order will be consider only partially fulfilled so the Buyer will be entitled to ask for an indemnification for any suffered damage.

18. Assignment

Seller shall not assign any of its rights or interest in this Agreement or any Order or subcontract its performance of this Agreement or any Order, without Buyer's prior written consent. Any prohibited assignment shall be void.

19. Applicable Law

Laws of European Community, without regard to conflict of law principles thereof, will govern this Agreement, and any order issued hereunder.

The Parties expressly consent, and submit themselves, to the exclusive jurisdiction of the Switzerland Confederation for adjudication of any claim.

20. Confidentiality

Seller shall not, except as required in performance of an Order, disclose or use at any time any information which is not publicly known about Buyer's products, processes or services and which is disclosed to or learned by Seller prior to or during such performance and fully comply to the MNDA.

Seller shall, upon demand by Buyer, surrender to Buyer any and all confidential or proprietary documents and other information of Buyer in whatever form which are in Seller's possession or control.

21. Buyer's Information

Buyer retains title to all information and materials (including, but not limited to, all drawings, designs, specifications, technical data and production or product "know-how") furnished to Seller to facilitate performance of an Order, and the same shall be (i) treated as Buyer's confidential information, (ii) used exclusively by Seller to complete the Order, and (iii) returned to Buyer at Buyer's direction or upon completion, termination, or cancellation of the Order, along with all copies or reproductions thereof, unless otherwise agreed to in writing by Buyer.

Seller shall thereafter make no further use of any such drawings, designs, specifications, technical data and production or product "know-how" or of any information derived therefrom in the performance of work for any other customer without Buyer's prior written consent.

22. Seller's Information

Seller retains title to all information and materials (including, but not limited to, all drawings, designs, specifications, technical data and production or product "know-how") furnished to Buyer to facilitate performance of Sales, and the same shall be (i) treated as Seller's confidential information, (ii) used exclusively by Buyer to complete the sales, and (iii) returned to Seller at Seller's direction or upon completion, termination, or cancellation of the Order, along with all copies or reproductions thereof, unless otherwise agreed to in writing by Seller.

Buyer shall thereafter make no further use of any such drawings, designs, specifications, technical data and production or product "know-how" or of any information derived therefrom in the performance of work for any other customer without Seller's prior written consent.

23. No Publicity

Without Buyer's prior written consent, Seller shall not release any news release or publicity regarding this Agreement, an Order, or the fact that Seller is furnishing Goods to Buyer.

24. Non-Waiver

No waiver of any provision of this Agreement or any Order or any right or obligations of either Party shall be effective, except pursuant to a writing signed by the Party waiving compliance, and any such waiver shall be effective only for the specific instance and purpose stated in such writing

25. Final provisions

For all that is not regulated in this document, the European regulations in force at the time of conclusion of the contract are valid.
